順逆勢分析

交易策略 – Python 實作布林通道

策略邏輯

```
# Create signals
signals['positions'] = 0.0

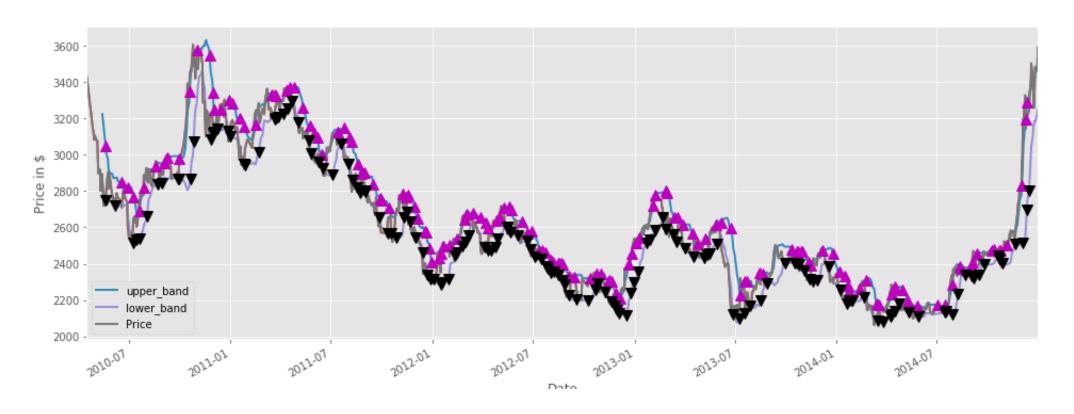

condition1 = np.where((signals['Price'][window:] > signals['upper_band'][window:]))
condition2 = np.where((signals['Price'][window:] < signals['lower_band'][window:]))

signals['positions'][condition1[0]] = 1
signals['positions'][condition2[0]] = -1

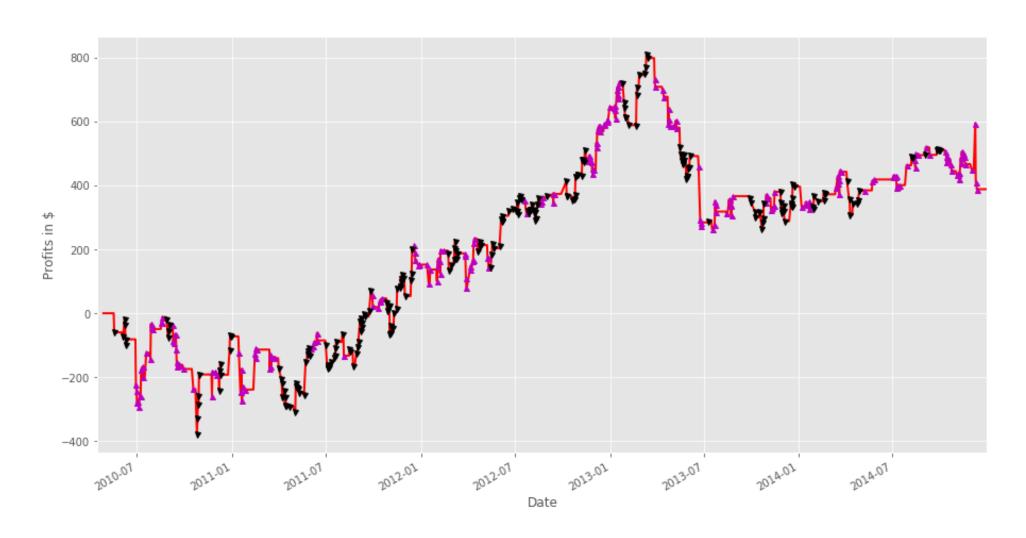

# Generate trading orders
signals['signal'] = signals['positions'].shift(1).diff()
signals['signal'] = signals['positions'].shift(1).diff()</pre>
```

收盤上穿布林通道上界買進、收盤下穿布林通道下界賣空
